

# Instructions for using these files for a two colour screen.

**Step 1:** Print out the files onto A3 acetate AKA transperancy "actual size" in print preference. 3 files, front yellow & red and Yappa T shirt back.

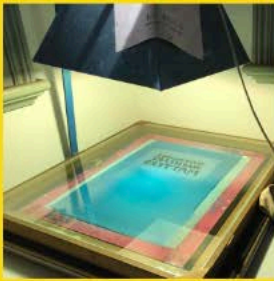

**Step 2:** Expose each design on a different screen, 3 screens.  
Red layer front design yellow layer front design.  
Its important to line the red and yellow registration marks up. See diograme

for the Yappa back of t shirt design placement needs to sit on the screen a bit higher on the screen to print in the shoulder blade area.

**REMEMBER** to reverse the image the acetate on the screen when exposing it.

That way when you flip your screen around to use the print side it will print the correct way. out side frame is the exposure side inside the frame is the print side.

## Step 3

Use your front tshirt acetate to align the front yellow & red screen in your carocel. Once rego marks are matched..(XL).. print yellow colour first and then hair dry t shirt then print the red colour next.
